

The Morrison Medical Select Backboard

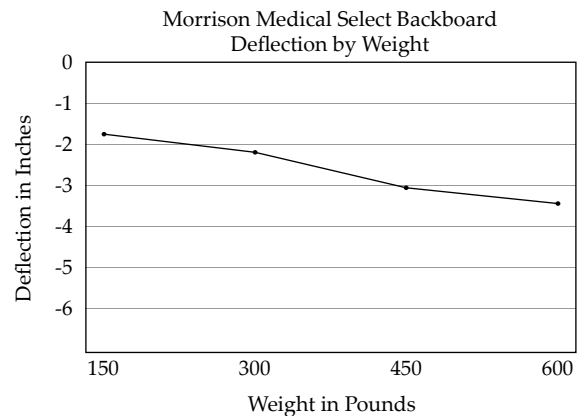

The Morrison Medical Select Backboard features a seamless design for quick and easy cleaning and decontamination. Both rigid and lightweight, this backboard weighs only 14½ pounds and measures 71½" x 16" x 1¾", occupying minimal storage space. Oversized hand holds easily accommodate gloved hands and allow for both Loop-Lok and speed clip straps to be attached easily in pinned slots. Pins are molded into the board, increasing their durability. Hand holds are raised for easy lifting and preventing scraped knuckles and straps. Recessed edge contours provide extra stabilization of standard head immobilizers. The Morrison Medical Backboard tapers toward the foot end for easy extrication in confined areas. This also provides a more narrow area ideal for pediatric use. Economically priced. High degree of x-ray translucency. Made in the USA.

Deflection

Test results illustrated show deflection of the backboard supported at ends with weight evenly distributed.

In an alternate test, where the backboard was supported at 18" from ends (location where board is commonly carried), the backboard deflected only 1/8" at 600 pounds.
